TBG: $\theta = 1.4^\circ$, $\varepsilon = 0.1\%$, $\phi = 0^\circ$, $\mu = 0.5$ meV
Single spin and valley; raw continuum grand potential is unregularized
Large background grows with basis cutoff
Raw grand-potential derivative (HF)
Independent BZ boundary
M_x (μ_B/cell)
Plane-wave cutoff tr
HF minus boundary vs full-band formula
Max component error (μ_B/cell)
k-mesh nk
Formula: component x, tr=4, nk=40
Production ncut=100
M_x (μ_B/cell)
Band-window cutoff ncut
Formula: component y, tr=4, nk=40
Production ncut=100
M_y (μ_B/cell)
Band-window cutoff ncut
